Vision

To elevate the creative and financial position of software developers through education, in-person connection, and creating safe spaces to build business ideas.

Technical Toolkit: Python, PyTorch, JavaScript, React, Node.js, Flask, LLMs & RAG, Agentic Coding Frameworks, Snowflake, Vercel, Cursor, IntelliJ IDEA, VS Code, SRE Support, Expo, Jules, Antigravity, Luma.

Business & GTM Toolkit: Developer Advocacy & Evangelism, Partner Engineering, Enterprise Merchant Integrations (\$1B+ Portfolio), GMV Attribution & Revenue Acceleration, Go-To-Market (GTM) Strategy, Developer Paved Paths & Enablement, Cross-Functional Stakeholder Alignment, Voice of the Developer Synthesis, Multi-City Field Research & Customer Discovery, Technical Community Architecture.

Professional Experience

Beginner | Founder, Developer Product Management

San Diego, CA (Hybrid) | Mar 2026 – Jul 2026 (5 mos)

- **Developer Engagement:** Built and launched a progressive web app enabling technical founders to refine pitches and practice fundraising in-person with potential customers. Successfully acquired initial paying users.
- **Community Architecture:** Established the beginning of a local technical network by hosting targeted events for product-focused tech professionals and engineers in San Diego
- **Market Advocacy:** Traveled across major tech hubs (NYC, SF) – including weekly trips to LA over a 2-month period – to conduct user research, gather developer feedback, and evangelize the product framework directly with engineers and potential VC investors.

Affirm | Software Engineering Manager (L7), Merchant Advocacy

San Diego, CA (Remote) | Mar 2025 – Feb 2026 (1 yr)

- **Program Orchestration:** Directed a high-pressure, 5-week strategic website revamp (affirm.com), unifying engineering, design, and product content to successfully unlock critical GMV attribution features.
- **Cross-Functional Performance:** Facilitated engineering trade-offs throughout the revamp to optimize mobile performance, driving an incremental \$500K GMV during a pre-Black-Friday/Cyber-Monday (BFCM) 2025 promotional window.
- **First-Principles GenAI Upskilling:** Spearheaded organizational adoption of LLM code-generation utilities and agentic frameworks via team workshops and one-on-one's, leading to stathe merchant portal at 99.9% uptime and de-risking catostrophic failure points ahead of BFCM 2025.
- **Stakeholder Alignment:** Mediated and resolved complex technical conflicts across Manager, Director, and Staff+ levels by defining timelines and written architectural decisions to unblock a critical platform re-architecture. Platform re-architecture provided better domain seperation, enabling support for 99.99% uptime capabilities

Affirm | Developer Support Engineering Manager (L6 → L7), Partner Engineering

San Diego, CA (Remote) | Jul 2021 - Mar 2025 (3 yrs 9 mos)

- **Developer Empathy & SRE Transition:** Transformed a global support operation (EMEA & North America) into a proactive development and SRE support function, systemizing 80% of operational workflows and scaling the team from 1 to 6 engineers (eventually 9 after re-org)
- **Data-Driven Advocacy:** Developed a full-stack reporting and analytics suite (Python, Flask, Snowflake) removing 16 hours of manual overhead monthly, shifting the entire team to higher strategic work, and helping to retain multiple \$100M+ GMV enterprise merchant partners

Affirm | Developer Support Engineer (L4 → L5), Partner Engineering

San Francisco (On-site) & San Diego, CA (Remote) | Sept 2019 – Jul 2021 (1 yr 11 mos)

- **Technical Translation & Liaison:** Served as the primary technical point of contact for SMB merchants; established the foundation for data-driven developer advocacy by diagnosing B2B integration bugs, developing ETL pipelines for easier ad-hoc analysis of e-commerce platform issue themes, and translating them into actionable platform solutions to reduce partner churn.

Galvanize Inc | Lead Software Engineering Immersive Resident

San Francisco, CA (Hybrid) | May 2019 – Aug 2019 (4 mos)

- **Developer Onboarding:** Mentored a cohort of ~20 incoming Hack Reactor students, guiding them through practical JavaScript application development, Git/GitHub best practices, and foundational developer workflows.
- **Empathetic Code Review:** Managed multi-repo grading and delivered constructive code reviews, building psychological safety and technical confidence for career transitioners entering the industry.

The Tech Interactive |

Gallery Programs Specialist → Experience Development Specialist & Prototyping Studio Coordinator

San Jose, CA (On-site) | May 2017 – Jan 2019 (1 yr 9 mos)

- **Partner Engineering & Curriculum Design:** Partnered directly with Google to design and launch hands-on data literacy workshops (e.g., 'Toy Tops'), introducing data and hardware concepts utilizing mobile accelerometers and sensor APIs.
- **Cross-Functional Prototyping:** Collaborated with a Staff Engineer and exhibit designers to prototype and run UX-research for a sustainability-focused city exhibit, combining 3D-printed models, graphical projection mapping, and research-backed prompts for museum guests to engage with. Insights from the research were incorporated into the final exhibit design.
- **Creative Automation & Community:** Engineered generative digital signage using JavaScript (p5.js) to automate daily workshop scheduling. Awarded the 'Monthly Innovator Award' for spearheading cross-departmental skill-sharing.

Computer History Museum | Workshop Instructor, Education Programs → Design Code Build Instructor

Mountain View, CA (On-site) | Mar 2017 - Nov 2018 (1 yr 9 mos)

- **Community Event Orchestration:** Engaged with event attendees and volunteers for large-scale 'Design Code Build' events, introducing Silicon Valley families and Title I students to software engineering.
 - **Hardware & Software Integration:** Guided diverse groups of students across varying developmental levels through cross-disciplinary engineering exercises, blending physical builds (Rube Goldberg machines) with custom software triggers
 - **Inclusive Technical Storytelling:** Delivered engaging, real-time presentations and guided tours on the history of computing to large groups (10 - 20), dynamically adapting complex concepts based on the room's baseline knowledge and integrating insights from industry veterans in attendance.
-

Education

- **Deep Atlas** | Residency, Applied AI and Machine Learning
- **Northwestern University** | Graduate Coursework, Learning Sciences
- **University of California, San Diego** | B.S. NanoEngineering - Cum Laude
